

# MRN

MRN software configuration for 64 bit and 32 bit Linux

To run the MRN software on a linux computer it is important that some library packages get installed. The packages below are mostly important on a 64 bit computer. But does not hurt to install on a 32 bit computer

Go to the terminal write:

```
sudo apt-get install lib32z1
```

Press y and enter

Next write:

```
sudo apt-get install lib32stdc++6
```

Press y and enter

Last write:

```
sudo apt-get install libsdl-sge-dev:i386
```

Press y and enter

Now right click on the folder with the robostacker file in it, and click open in terminal.

The path to the folder will now be linked in the terminal

Now write:

```
chmod +x ./robostacker
```

To open the program in simulating mode write:

```
./robostacker -su -s
```

To run the program on a machine write

```
./robostacker -su -s mouse
```
